A Additional Technical Details	15
B Code Snippets or Pseudocode of Relevant Modules	16
C Dataset Specifications or Experimental Settings	17

1 Introduction

1.1 Context and Motivation

1.2 Research Objectives

1.3 Main Contributions of the Thesis

1.4 Structure of the Document

2 Theoretical Background

2.1 The Evolution of Learning in Artificial Intelligence

2.1.1 Artificial Intelligence Paradigms

2.1.2 Symbolic and Hybrid Approaches in Artificial Intelligence

2.1.3 Reinforcement Learning: Learning Through Experience

2.2 Computer Vision Techniques

2.2.1 Classical Techniques for Video Analysis

2.2.2 Visual Perception in Dynamic Environments

2.2.3 Deep Learning for Feature Extraction from Video Streams

2.3 Knowledge Representation and Reasoning

2.3.1 Symbolic Representations, Semantic Networks, and Interpretable Models

2.4 Reinforcement Learning Foundations

2.4.1 Reinforcement Learning Principles and Deep Q-Networks

7

2.5 Atari-like Environments as Testbeds

2.5.1 Characteristics and Challenges of 2D Game Environments

3 State of the Art and Challenges

3.1 Challenges in Symbolic Interpretation

3.1.1 The Illusion of Understanding

The Lack of World Models

3.1.2 The Black Box Problem

Making Sense of AI: Toward Explainability

3.1.3 Learning Paradigms and Explainable AI

Learning Without Understanding

Explainable AI: Goals and Approaches

Post-hoc Explainability

Intrinsic Interpretability

Why XAI is Not Enough

3.2 Cognitive Foundations

3.2.1 Human World Modelling and the Origins of Structured Cognition

3.2.2 Core Knowledge Theory: Cognitive Principles and Psychological Foundations

3.2.3 Definition and Relevance for World Understanding

3.2.4 Cognitive Models and Symbolic Representation

3.3 Positioning of the Proposed Framework

4 Framework Design - Proposed Framework

4.1 Conceptual Foundations

4.1.1 Evolution of the Idea

4.2 Proposed Implementation

4.2.1 Segmentation

4.2.2 Symbolic System as Knowledge Construction Module

4.2.3 From Symbolic Rules to a Playable Environment

4.2.4 Generic Environment as a Transitional Representation

4.2.5 Deep Q-Network in a Domain-Agnostic Environment

5 Implementation

5.1 End-to-End Pipeline

5.2 General Architecture of the Framework

5.2.1 Design Choices

5.2.2 Selected Techniques and Algorithms

5.2.3 Modular Structure of the System

Video Acquisition and Preprocessing Module

Feature Extraction Module

Symbolic Mapping Module - Symbolic Reasoning Engine

Integration of Core Knowledge for Semantic Understanding

RL Agent

5.2.4 Optimizations and Efficiency Considerations

6 Experimental Evaluation

6.1 Datasets and Testing Scenarios

6.1.1 Evaluation Metrics: Accuracy, Interpretability, Scalability

6.2 Experimental Results

6.2.1 Comparison with Existing Methods

6.2.2 Critical Discussion of the Results

7 Applications and Future Perspectives – Conclusion

7.1 Future Directions

7.1.1 Potential Applications of the Framework

7.1.2 Possible Extensions of the Work

7.1.3 Open Challenges and Future Research Directions

7.2 Summary of Contributions, Impact of the Research, and Final Reflections

References

A Additional Technical Details

B Code Snippets or Pseudocode of Relevant Modules

C Dataset Specifications or Experimental Settings
